

IBM Envizi

Accelerating your Sustainability Performance

IBM Envizi offers comprehensive data and analytics software to collect, manage and derive insights from sustainability data.

Envizi is delivered as an easy to adopt modular SaaS solution:

Remove the barriers to accelerating your Sustainability Performance with some of Envizi's Key Benefits:

Full Featured
Envizi's 9 modular SaaS products streamline ESG reporting and identify efficiency opportunities.

Streamlined
Automatically collect and consolidate >500 data types from diverse sources including energy retailers and management systems

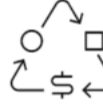

Time Saving
Collect data once, report multiple times. No more manual data calculation with different emissions factories, metrics, and reporting boundaries.

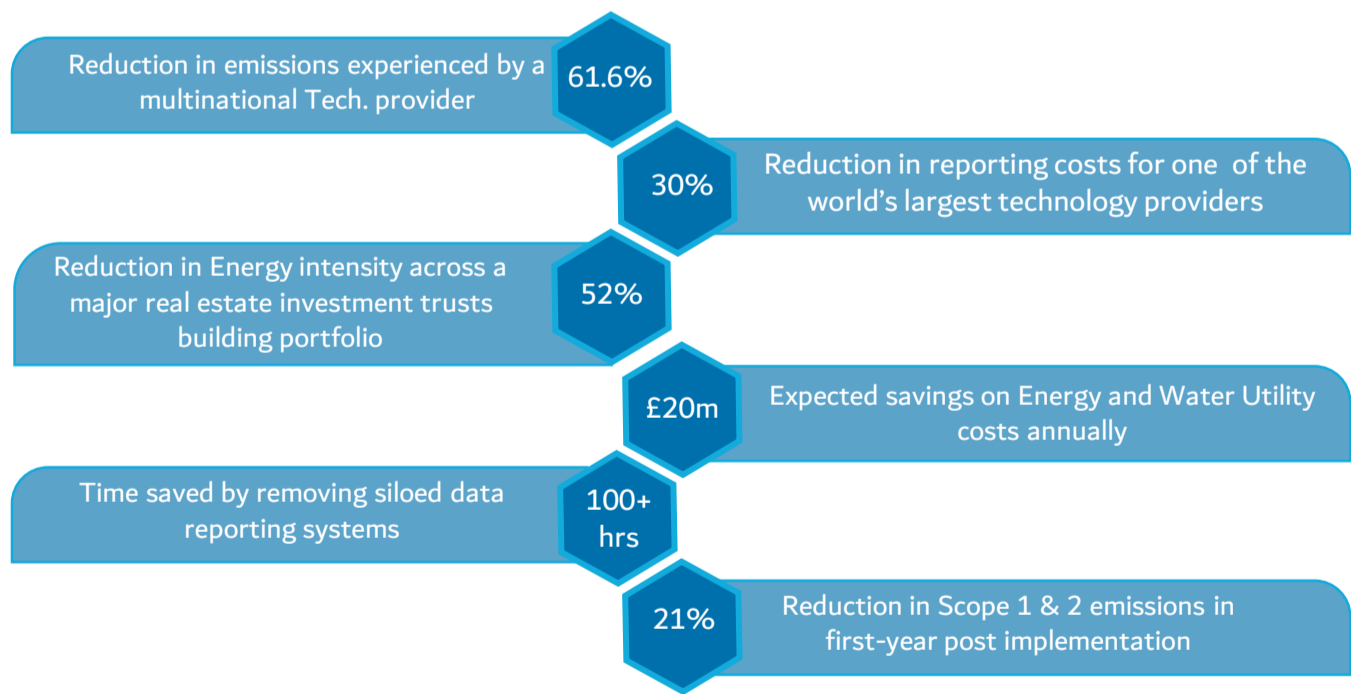

Audit Ready
Report with confidence, Envizi ensures your ESG data has been captured in a single system of record with audit-trails and financial-grade accuracy.

Silo Busting
Easily engage all stakeholders with user-friendly and configurable tools that deliver powerful visualisations on customisable dashboards.

Cost Effective
Realise cost-saving efficiencies in the process of reducing waste, energy consumption and emissions – all powered by the data-driven performance of Envizi.

IBM Envizi's ESG software products are designed for the Utilities sector and many more.

Utilities
Consolidate energy and emissions data to identify event-driven cost increases across your network, produce ESG reports and deliver results against sustainability goals.

Financial services
Reduce the complexities of carbon calculations and reporting from the branch network to the lending and investment portfolio.

Real Estate
Capture and analyse energy consumption, GHG emissions and waste data in a centralized location across your real estate portfolio.

Manufacturing
Consolidate energy data across your factories, warehouses and suppliers, unlock actionable insights and improve Scope 3 inventory accuracy.
