

CLOUD SOC ESSENTIALS

Powered by

EMPOWERING YOUR TEAMS TO KEEP YOUR AWS ENVIRONMENT SECURE WITH FOCUSED AND ACTIONABLE ALERTING

Combining Capgemini's decades of cloud expertise, Security Operations Center (SOC) management excellence, and the power of Trend Micro's advanced threat capabilities the Cloud SOC Essentials service provides customers with advanced insight into the highest risk behaviors in their AWS environments at a fraction of the cost of alternative solutions.

Enterprises know they need security visibility and actionable intelligence, but many struggle with a lack of resources or overcomplexity in available tooling. They often find themselves overwhelmed by alerts from cloud-native and third-party tools and may lack the funding to run their own SOC or justify the cost of a fully managed SOC service. Even the best native cloud security products may remain underutilized as IT and security teams are understaffed and unable to fully leverage the capabilities.

The Cloud SOC Essentials for AWS service leverages Capgemini's extensive cloud and SOC experience and business insight combined with Trend Micro's advanced threat capabilities to provide customers with actionable visibility and intelligence to the highest value threats in their cloud environments while also providing executive-level perspectives as they move into the cloud. This emphasis on actionable findings and remediation guidance will help customers to get started faster, avoid alert fatigue over time, and receive extensive value from a cost-efficient service. With this service, customers that otherwise might not have visibility into the highest risk threats in their AWS environments gain real-time insight, not just into when an attack happens, but into how to begin handling it. This enables customers to move into the cloud with confidence, knowing that Capgemini and Trend Micro have their back.

Capgemini Cloud SOC Essentials powered by Trend Micro delivers a first-of-its-kind managed offering providing foundational SOC functionality at a fraction of the cost of traditional managed SOC services.

Capgemini supports thousands of organizations with our managed security and managed cloud services with our hundreds of certified AWS specialists. Combine that with our deep partnership with Trend Micro and you get the benefits of decades worth of expertise supporting you on your secure journey to the cloud.

The Cloud SOC Essentials service operates with the belief that you don't have time to chase down every alert. When you're running your own SOC, or even responsible for managing a SaaS detection and response provider, you can quickly get overwhelmed with alert fatigue. To help you with this, we balance the trade-off between the total visibility and actionable alerts to focus solely on delivering findings that indicate there's an immediate issue. We also combine that alert with the experience of Capgemini SOC engineers to provide you with actionable steps to address the issue immediately.

But how do you know you're getting value you need? In addition to the incident reporting, we provide operational reports and executive reports. Our operational reports help you identify patterns in your alerts and findings so you can tackle the most problematic resources, internally and externally. And our Executive report provides trend analysis and recommendations so you can make the right investments for your organization.

For a free trial of the Capgemini Cloud SOC Essentials powered by Trend Micro service, please go the AWS Marketplace and search for Capgemini. You will be able to sign up and enable your account for a 90-day free trial, after which you will be subscribed at the monthly rate of \$249. You can also contact us for more information at
